

# A bit about...Dentures and Overnight Denture Storage

## **Dentures are hydrophilic – They absorb moisture**

The latest research supports **Best Practice** for denture storage is leaving the full or partial denture to **dry overnight** – this reduces the bacterial load (as they are slightly porous) minimising potential bacterial infection for the wearer. Thereby improving Quality of Life

# A bit about...Securing Dentures

## BEST PRACTICE

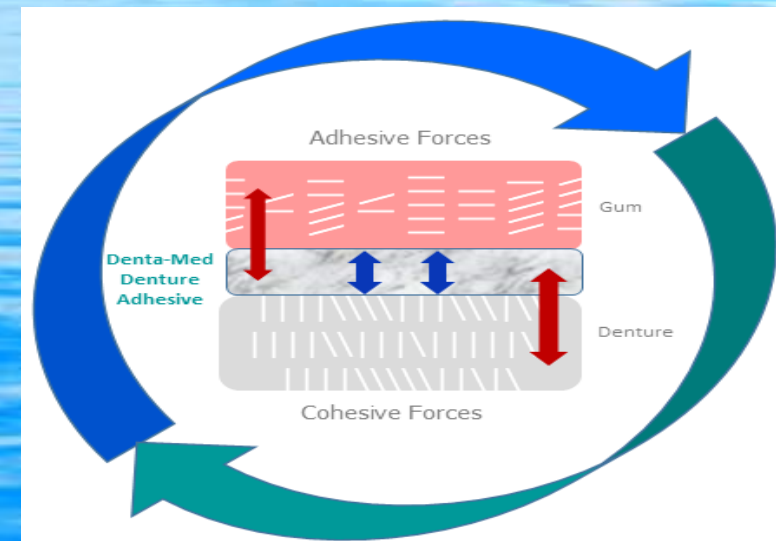

Denta-Med Denture Adhesive Gel uses natural Sclerotium Gum that is a naturally derived polysaccharide polymer to secure ALL day

Denta-Med™ Denture Adhesive Gel does not contain PVM/MA copolymer or Zinc

Apply three short, thin lines inside the denture (front and both sides) *Not on the palate or the back*. Gently bite down to secure

Denta-Med™ Denture Adhesive Gel looks fairly similar to other denture adhesives in texture and viscosity...Initially

However Denta-Med™ Denture Adhesive Gel contracts over time, drawing the denture upwards and closer to the gum surface. This maintains a firm seal between the gum and the denture, preventing food debris entering and interfering with the fit. The occlusion (bite) of the closely adapted denture is not compromised.

*“Turns a great fitting denture into an amazing fitting denture.*

*There is no other product in this space on the market!!” Peter Rodda, Leading Prosthetist at Rodda Dental, SA*

# A bit about...Cleaning Dentures \*

## BEST PRACTICE

\*This ONLY applies when using Denta-Med™ Denture Adhesive Gel

Secures ALL Day  
Neutral Taste  
Easy to Clean

## Easy To Clean

Gently brush the surfaces of the denture clean with WATER

Apply a pea sized amount of Denta-Med™ Dry Mouth Gel on a moistened gauze cloth to gently wipe the mouth and gums clean after removing the denture

# Denta-Med™ Denture Adhesive Gel

## Key Facts

- Secures ALL Day
- Neutral Taste
- Easy to Clean
- Saves time and money
- No extra denture cleaning materials required to purchase
- Cleans off straight away with water
- Sore spots are prevented from developing
- comfort for the wearer is maintained and nutritional intake is not jeopardised
- Improves **Quality of Life**
