Denta-Med
Oral Health Leads to Body Health

“All my patients wear full or partial dentures. The feedback from my patients in almost every case have said that they find it easier to masticate and digest their food. I have many comments about how they like the taste of Denta-Med Gel. One of my patients said to me.” This product has changed my life as I can now enjoy eating again”. Another advised me in her words, “ I now can sleep all night without waking up with a dry mouth and having to drink water and then I have to go the toilet.” I am finding most months I receive this type of feedback.

The viscosity of Denta-Med Gel is perfect as it adheres to the mucous membranes for many hours with some clients. It also aids retention with full dentures. I advise my clients to apply the Gel to all surfaces of their dentures. The Gel helps create surface tension between the denture base and the mucosa that is lost when patients have xerostomia (dry mouth).

I highly recommend this product as I have never had negative feedback. **Scott Randall – Leadership Team North Richmond Community Health, Vic, Australia**
