

## Predictable results with **EthOss® Synthetic Bone Graft**

A review of the best practices to help ensure graft success with minimal failure.

Presented by:

**Dr. Nick Kulkarni**

BDS Grad Dip Clin Dent (Oral Implants) (Syd Uni)

Dr Nick Kulkarni presents an examination of the best practices which help to ensure predictable results when using EthOss synthetic bone graft in a variety of clinical situations. He answers some of the most common questions clinicians want to know, illustrated and explained with his own patient cases. This webinar is ideal for clinicians who would like to expand their knowledge and techniques using synthetic bone grafting material.

- Patient selection and treatment planning
  - For those beginning their EthOss journey
  - For the more advanced EthOss user
- Mixing EthOss – what can I mix it with, how wet, how dry and what should I do if it starts to set while I’m working with it
- Drying and setting – how does setting work, how long does it take to set, what should I do if it is not setting, what am I looking for to determine appropriate setting, setting to achieve volume in a ridge augmentation
- Membranes – bone grafting **WITHOUT** the hassle of a membrane
- Suturing – tension free closure
- Single sites vs multiple sites – what do I need to know when working with EthOss

**Wed 6 Nov 2024**
